

Official Website — Deep AI Analysis

Paste the major page URLs (one per line). It scrapes each, reads what AI sees, audits schema, checks internal linking, and reports exactly what to change.

Scraped: <https://www.lareserve-geneve.com/en/>, <https://www.lareserve-geneve.com/en/luxury-accommodations/>,
<https://www.lareserve-geneve.com/en/restaurants-and-bars/>, <https://www.lareserve-geneve.com/en/luxury-spa/>,
<https://www.lareserve-geneve.com/en/special-offers/>, <https://www.lareserve-geneve.com/en/experiences/>

AI-readability score: 65/100 — The site has a good amount of structured data but lacks depth in schema implementation, especially for specific offerings like restaurants and spa services.

The website for La Réserve Geneva has implemented basic schema types such as `WebPage`, `Hotel`, and `BreadcrumbList` across its pages. However, there is a notable absence of specific schema types like `Restaurant`, `Spa`, and `FAQPage`, which could enhance the site's visibility and relevance in search results. The content is rich in detail but lacks structured data to support it, particularly in areas like room details and special offers. Internal linking is generally strong, but some pages could benefit from more contextual links to improve navigation and SEO.

Internal linking

The internal linking structure is comprehensive, with most pages linking back to the homepage and key sections like accommodations, restaurants, and spa services. However, the 'Experiences' page could benefit from more direct links to related pages like special offers or specific accommodations that enhance those experiences. There are no orphaned pages, but ensuring that all pages have multiple entry points from different sections could improve user navigation and search engine indexing.

What to change or add — whole site

Add detailed `Restaurant` schema to improve visibility of dining options.

Implement `Spa/HealthAndBeautyBusiness` schema for spa services to enhance search relevance.

Enhance `HotelRoom` schema with detailed room features and amenities.

Include `Offer` schema for special offers to improve discoverability.

Add `Event` schema for experiences to highlight unique activities available.
